#### **DETAILED ACTION**

### Response to Amendment

1. This action is in response to the amendment, paper no. 7, mailed May 18, 2001. Claims 8-9 were canceled rendering Claims 1-7 and 10-19 pending.

## Claim Rejections - 35 USC § 103(a)

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-7 and 10-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rothe et al. (U.S. 5,137,770) for the reasons set forth in paragraph 6, mailed April 17, 2001.

## Response to Arguments

- 4. Applicant's arguments to rejection under 35 U.S.C. 112, mailed May 18, 2001 have been fully considered and are withdrawn.
- 5. Applicant's arguments have been fully considered but they are not persuasive. Applicant states in page 2 of remarks, "Claim 1 has been amended to recite that the first and second sheets are "transparent." Basis for this can be found in the fact that the glazings may be used as a

windshield, and the sheets 1 and 2 are formed of float glass (page 6, lines 13 and 14). Although it is speculated that the glazings may be used as a windshield and sheets 1 and 2 are formed of float glass, applicant does not disclose the first and second sheets as being transparent.

Additionally even if applicants float glass is transparent, so are the glass sheets of Rothe as they are used in a windshield as well.

Applicant argues Rothe et al. does not disclose the first sheet offset in relation to the second sheet to form an exposed edge portion and the intermediate element at least partially covering the adhesive layer bind the second and first sheet, at the exposed edge. The examiner disagrees. Rothe specifically teaches adhesion of the layers at the edges in column 8, line 33-36. Additionally, Rothe teaches adhering the outer edge of the glass body to the primer in column 7, lines 63-68. Rothe discloses his invention being subjected to stress, which is analogous to shock resistance.

6. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
